Evening Brief

Date: Monday August 24th, 2020

Weather Summary

*** Mixed Wet & Dry Thunderstorms in the Northern Half of the Great Basin ***

Significant lightning has occurred in central portions of the Great Basin over the past 24 hours. As the 4-corners high steers upper level moisture and instability further northward, thunderstorms will expand across northern NV and Idaho, into Western Wyoming Tuesday. High Risk for Lightning has been issued this region Tuesday (refer to 7-Day Matrix and Map for more day to day details).

The 4-Corners high will weaken and flatten a bit by midweek as a weak low with drier air pushes into the northern California and Western Nevada, bringing an increase in southwest winds and drier to western areas by midweek. Remaining seasonably warm and dry most areas, but still chances of lingering isolated thunderstorms in far southern Utah and parts of the Arizona Strip. A strong cold front could bring gusty northwest winds to much of Idaho and Wyoming by this weekend.

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	PL 3	Moderate Initial Attack Activity
National	PL 5	New Fires and Acres: 25 fires 6,521 acres; 202 acres of large fire growth

Fuels/Fire Potential

*** A Fuel and Fire Behavior Advisory is in Effect for Eastern Nevada, Most of Utah and the Western Arizona Strip ***

Fuels in all regions, of all class sizes, have dried to critically dry fuel conditions.

Recent precipitation in the Arizona Strip and southern parts of Utah/Nevada will take the edge off the critical fuels over the next 2 days or so. Fuels will briefly moisten by midweek across northern areas as well, but that will be short-lived as drier and breezy conditions move in late in the week and into the weekend across Idaho and Wyoming.

Another push of monsoonal moisture should bring some moistening conditions to eastern Utah and the AZ Strip by this weekend.

Live fuel moisture in the sagebrush has dropped to below 100% across most lower elevations, from the Snake River Plain southward into most of Utah, Nevada and the Arizona Strip, where sagebrush moisture is breaking records, 50-60% in several stations. supporting Extreme Fire Behavior. Across the

Central Idaho Mountains into Western Wyoming heavier dead fuels have dried to normal late summer levels, with the increased threat of lightning fires.

Resources:

Aviation within the Great Basin

- 1 VLAT, 3 LATs
- 25 SEATs, 12 AA, 1 ASM
- 9 Type 1 Helicopters / 7 Comm.
- 11 Type 2 Helicopters / 6 Comm.
- 20 Type 3 Helicopters / 9 Comm.

Crews Committed within the Great Basin

- 12 IHCs / 0 Available
- 11 Type 2IA / 1 Available
